Attention Beckman Coulter Customer,

Beckman Coulter is initiating a field action for the product listed above. The affected product information is in Appendix A. This letter contains important information that needs your immediate attention.

ISSUE:	Beckman Coulter has determined that the DxC 500 AU Clinical Chemistry Analyzer may not run a requested calibration order for a two-part reagent and subsequently prevents any new calibration order from being placed. For two-part reagents, when reagent blank or calibration is ordered during sample processing and then any of the components (R1 and/or R2) depletes to zero tests, the analyzer will not be able to complete the calibration request, and the calibration order will remain pending. The analyzer will not allow additional calibration orders to be requested for any assays.
IMPACT:	- Calibration order for the two-part reagent remains pending. - No new calibration orders can be processed for any assays which may cause a delay in reporting test results. Existing calibration curves remain valid until expiration of the curve.
ACTION:	- Do not place calibration orders when the analyzer is processing samples. - Refer to the DxC 500 AU IFU Reagent Overview section for instructions on Monitoring the Status of Reagents. - Beckman Coulter recommends sharing the content of this letter with your laboratory and/or Medical Director. - If you experience this issue on software version 1.3, 1.4, 1.4.1 or 1.4.2, contact Beckman Coulter for service.
RESOLUTION:	- This has been resolved in software version 1.4.3. - Your Beckman Coulter service representative will contact you to schedule the software upgrade.

The national competent authority has been informed of this field safety corrective action.
